

1-Use Case Diagram

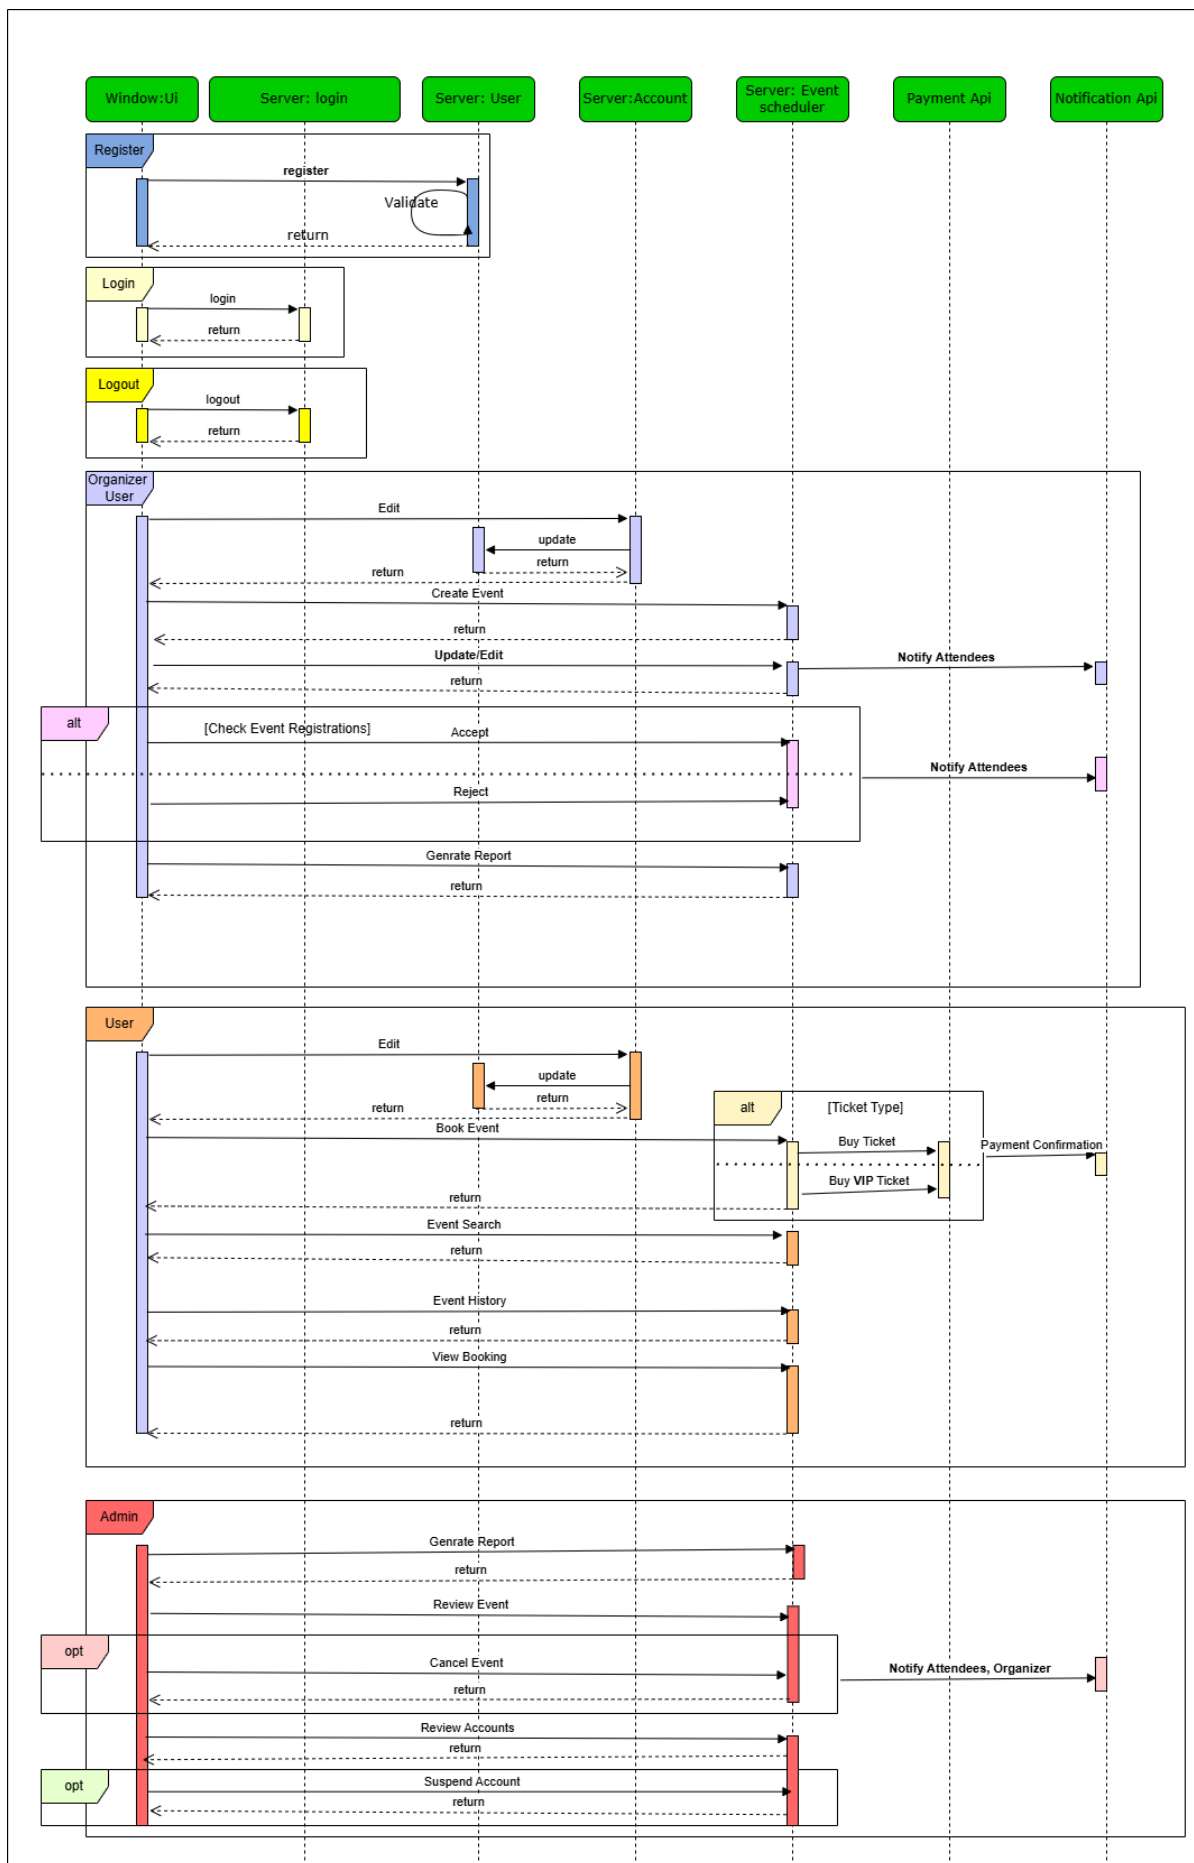

Name	Technology Service
Description	Users can find, book, and manage events. Organisers can create and handle their events, and administrators can manage the system and user accounts.
Actors	General User, Organiser, Administrator, Notification Service, Payment Gateway
Trigger	actions like browsing events, trying to book a ticket, or an organiser creating a new event.
Normal Flow	1-User Login or registration 2-General User explores events 3- User selects an event and books tickets 4-User Pay for the Event 5-System Send booking confirmation 6-Organiser login 7-Organizer creates an event 8-Organizer can accept or reject any attendees 9- The organizer can make updates on event details 10-administrator can cancel events or suspend accounts
Alternative Flow	1-Suspicious event, payment 2-Administrator suspends a user account

2-Class Diagram

- **Admin:** can manage accounts, review events, generate reports and suspend accounts.
- **Organizer:** can register, generate reports, create events, manage registrations, edit events, view attendees, and send updates.
- **Client:** can register, filter events, get their booking history, and book events.
The user might live at an Address, which has details like street, city, state, postal code, and country (the user chooses to put the address or not).
A Client can make many Bookings, booking has a time, date, and a booking type.
- **Event:** has details like a price, date, time, location, status, and a unique ID.
- **Filter:** can be used to search for events based on price, date, and location.
- **Account:** also has a status (active or not) and information about the user.

3-Sequence Diagram

- **Users** can register, log in, log out, view, search events, see booking history, and book events (which involves payment).

When users need to book an event, they have to choose a VIP or an ordinary ticket. After they pay, the system sends a confirmation email via the notification API.

- **Organizers** can check, accept, reject registrations and generate reports.

When organizers need to update event details and accept or reject attendees, the system sends a confirmation email via the notification API.

- **Admins** can generate reports, review/cancel events, and manage user accounts.

When the admin cancels an event, the system sends a confirmation email via the notification API.
